Click **Multiple Displays** to setup the dual display mode as same screen

3.3 <SATA configuration>

SATA Mode:

This option can let you select whether the Serial ATA hard drives would work under normal **IDE** or **AHCI**.

Chapter 4 <BIOS Setup>

The motherboard uses the Phoenix BIOS for the system configuration. The Phoenix BIOS in the single board computer is a customized version of the industrial standard BIOS for IBM PC AT-compatible computers. It supports Intel x86 and compatible CPU architecture based processors and computers. The BIOS provides critical low-level support for the system central processing, memory and I/O sub-systems.

The BIOS setup program of the single board computer let the customers modify the basic configuration setting. The settings are stored in a dedicated battery-backed memory, NVRAM, retains the information when the power is turned off. If the battery runs out of the power, then the settings of BIOS will come back to the default setting.

The BIOS section of the manual is subject to change without notice and is provided here for reference purpose only. The settings and configurations of the BIOS are current at the time of print, and therefore they may not be exactly the same as that displayed on your screen.

To activate CMOS Setup program, press key immediately after you turn on the system. The following message "Press DEL to enter SETUP" should appear in the lower left hand corner of your screen. When you enter the CMOS Setup Utility, the Main Menu will be displayed as **Figure 4-1**. You can use arrow keys to select your function, press <Enter> key to accept the selection and enter the sub-menu.

Appendix B <Flash BIOS>

B.1 <Flash Tool>

The board is based on Phoenix BIOS and can be updated easily by the BIOS auto flash tool. You can download the tool online from below link

<http://www.commell.com/Support/Product%20Technical%20Support/LN-D70.htm>

B.2 <Flash BIOS Procedure>

- 1.Extract the zip file(re-flash tool and BIOS file) to root of the USB flash drive.
- 2.Insert your USB flash drive in USB port of the board and power on the system.
3. Boot to EFI-Shell mode (**UEFI Boot Enable, Legacy Boot Disable**)

then input the “**fs0:**” command to switch to the root of the USB flash drive.

Appendix C <Programming GPIO's>

The GPIO' can be programmed with the MSDOS debug program using simple IN/OUT commands. The following lines show an example how to do this. (The GPIO is open drain)

GPIO0.....GPIO7 bit0.....bit7

```

-o 4E 87 ;enter configuration
-o 4E 87
-o 4E 07
-o 4F 07 ;enable GPIO function
-o 4E 30
-o 4F 10 ;enable GPIO configuration
-o 4E F0
-o 4F xx ;set GPIO as input/output; set '1' for input,'0'for
output

```

-o 4E F1

-o 4F xx ;if set GPIO's as output,in this register its value can be set

Optional :

-o 4E F2

-o 4F xx ; Data inversion register ; '1' inverts the current value of the bits , '0' leaves them as they are

-o 4E 30

-o 4F 01 ; active GPIO's

For further information, please refer to NCT6106D datasheet.

Appendix D <Programming Watchdog Timer >

The watchdog timer makes the system auto-reset while it stops to work for a period.

The integrated watchdog timer can be setup as system reset mode by program.

Timeout Value Range

- 1 to 255

- Second or Minute

Program Sample

The integrated Watchdog Timer can be set up by programming.

-O 4E 87 Enter configuration

-O 4E 87

-O 4E 07	Logic Device Enable
-O 4F 08	
-O 4E 30	WDT Enable
-O 4F 01	
-O 4E F0	Set as Second*
-O 4F 00	
-O 4E F1	
-O 4F 0A	Set reset time 10 Sec

You can select Timer setting in the BIOS, after setting the time options, the system will reset according to the period of your selection.
